

How to save the planet?

SEPARATE THE GARBAGE

To help the environment we can separate the garbage in the following order:

Organic, which is food scraps or things that can decompose.

Recyclable inorganic, such as paper, cardboard, glass, aluminum, and plastic like PET.

Non-recyclable inorganic, which is things that can no longer be reused or recycled.

PET

PET IS A TYPE OF PLASTIC WIDELY USED IN BOTTLES AND CONTAINERS. IT'S IMPORTANT TO KNOW THAT IT CAN BE RECYCLED, SO IT SHOULDN'T BE THROWN AWAY WITH REGULAR TRASH. BY SEPARATING IT PROPERLY, WE HELP ENSURE IT CAN BE REUSED AND PREVENT IT FROM POLLUTING RIVERS, OCEANS, OR THE LAND.

RAISE AWARENESS: THE POWER OF THE THREE R'S – REDUCE, REUSE, RECYCLE

Our planet is facing a growing waste crisis. Every item we throw away contributes to pollution, environmental damage, and climate change. But there's a simple solution we can all be part of: the Three R's—Reduce, Reuse, Recycle.

- Reduce: Cut down on what you consume. Choose products with less packaging and avoid single-use items. Small choices lead to big environmental savings.
- Reuse: Before tossing something out, think of how it can be used again. Reusing items helps conserve resources and reduces the need for new materials.
- Recycle: Turn waste into new products by sorting paper, plastics, metals and glass properly. Recycling helps reduce pollution and saves energy.
